HOW ARE WE DOING?

Adult Fruit and vegetable Consumption

Adult percent of overweight and obesity

Adults who are sedentary (lower is better)

DATA DEVELOPMENT AGENDA:
CONSIDER STATE/US DATA
TIMELINE DATA (AT LEAST SIX POINTS)

STORY BEHIND BASELINE:

- High percentage of families in poverty and unable to afford more expensive healthy foods
- High caloric fast foods are eaten on a regular
 - Processes
 - High-Sugar
- Obesity usually starts in childhood; Community will further evaluate this as we move forward with the adult population
- Stress
- Working parents, community involvement and lack of time to prepare healthy foods
 - Extracurricular activities in the evenings
 - Lack of healthy options at restaurants
- No exercise/sedentary lifestyle
- Underutilization of the park
- Cost prohibitive recreational activities
- Lack of transportation

Every year more and more persons are categorized as obese. Obesity is measured as having a body mass index (BMI) of 30 or greater. Several factors can increase obesity: sedentary lifestyle, lack of moderate physical activity, lack of consumption of fresh fruits and vegetables, and poor diet and nutrition. Obesity can also increase the risk for several health problems, like Type 2 diabetes (especially in youth), respiratory health issues, heart disease, poor joint health, high cholesterol, uncontrolled blood pressure, circulatory issues, stroke, and fatigue.

WHAT WORKS (BEST PRACTICES):

- Shape up Sommerville (Blue Zones)
- Eat Smart Move More Weigh Less (ESMMWL)

PARTNERS WITH A ROLE TO PLAY:

- BLM
- School District
- Parks & Recreation
 - State, City & County
- WIC
- Hot Springs County Memorial Hospital
- Media
 - Newspaper
 - Radio
- Gottsche
- Employers
